## Ivory Detector Discontinuation Notice

As a result of a thorough evaluation, Honeywell has decided to discontinue the NOTIFIER ivory detector line to focus on standardizing our offering and providing a stronger overall product range.

While we understand ivory detectors may still be needed to support legacy CLIP installations, we strongly recommend using the newer and more capable FlashScan protocol devices on all new NOTIFIER installations and converting existing ones. We will continue to expand our product offerings with more advanced technologies that the CLIP protocol cannot support.

To help with the transition, we have opened ordering for ivory detectors, as indicated in the models referenced on the next page, effective immediately. NOTIFIER ivory detectors will be fully discontinued as of **December 31, 2024**. Please place any final orders for these products on or before December 1, 2024.

Pricing for ivory detectors will remain as listed in your current price book, but a 50% price increase is expected in January 2024. Updated price books will be provided at a later date.

Please note that lead times on ivory detectors may be up to 30 days as Honeywell consolidates production runs of these legacy devices to prioritize orders for higher volume and newer protocol detectors.

Thank you for your business and continued support,
